

# From Albany to the Big Apple

Helping bridge the digital divide in New York through our Connected Learning Centers

Across New York, we're investing in technology, digital literacy and digital learning solutions to help students and families succeed. One of the ways we're doing this is by opening AT&T Connected Learning Centers to provide a free space within communities where people can access high-speed internet, computers and educational resources.

**Located within trusted nonprofits and community centers,** students and families can come to our Connected Learning Centers to access the resources they need to complete assignments, participate in virtual learning, look for jobs and more.

So far, we've opened **10 Connected Learning Centers** across New York, with plans to open **2 more this year**.
